Skills

- Languages: Java, Python, SQL
- Technologies: Spring Boot, MySQL, Kafka, Airflow, Redis, Cassandra, Docker, Protobuf
- Other: Microservices, Data structures, Object Oriented Programming, REST API, Design Patterns

Work Experience

Principal Associate **CapitalOne** **July 2025 - Present**

- Working on Databolt, an end-to-end data discovery and tokenisation platform. Primarily working on **data discovery and data cataloging** from various databases like Postgres, Databricks, and using tools like Airflow and Kafka.

Software Engineer II **Edelweiss** **Jul 2021 – Apr 2025**

- Engineered real-time order management system for stock market leveraging REST API and Protobuf achieving **less than 10 millisecond execution time** and processing 5,000+ orders daily.
- Built an automated portfolio management system using **Java**, **Spring Boot** and **Kafka**. This **enabled 50% faster strategy startup time** for more than 25 research teams.
- Collaborated with multiple stakeholders to architect a **low-latency algorithmic trading platform, based on microservices**, processing daily trading volume of ₹5M+. Thus reducing onboarding time of research teams from 2 weeks to 2 days. Enabling us to hire more research teams and trade on more capital.
- Optimized historical market data pipeline from Cassandra to trading framework, **slashing data retrieval latency by 80%** and achieving **99.999% data consistency**.
- Re-architected algorithm trading platform - supporting multi-asset trading strategies, having carry and expiry rollover support - **improving system scalability**, thereby doubling our trading capacity.
- Designed plug-and-play architecture for Options trading platform, **accelerating feature delivery time by 10x** and enabling autonomous strategy deployment for research teams.
- Managed and **mentored** a junior developer, **conducted code reviews**. Ensured adherence to best engineering practices and designed extensible and stable architecture, while fulfilling organizational goals.

Software Engineer **Nucleus Software** **July 2019 – Jul 2021**

- Developed loan delinquency management workflow, serving 20+ banking institutions, improving feature coverage by more than half, through Java, Spring Boot implementation.
- Owned the building, release and on-prem deployment of the FinnOne Collections 5.0 module using **Java, Spring Boot, Jenkins and Hibernate**.

Software Developer Intern **Nucleus Software** **Jan 2019 - June 2019**

- Developed front-end system using tracking.js, Django and Redis for tracking and registering attendance of 40 company interns.

Education and Achievements

Indian Institute of Information Technology, Allahabad **2015–2019**
B.Tech., Information Technology 8.0 CGPA

- Won 3rd place among 70 teams, in Hack In The North 3.0 Hackathon.
- Finalist in IIIT Hacks, Techathlon'16 and Rajasthan Hackathon 4.0 Quizzeria.
- Built continuously updating personal Link Blog from scratch with Golang and HTML.
